

**\$120.00**

Mobile Map Service (MMS) allows users to access and view the location of their GPS device online. This is the registration process to gain access to the Mobile Map Service.

All AVL100 series type devices are able to utilise this service, however, the customer is required to register for this service prior to usage, with a one-off fee. (AVL100 series devices have this service offered as an option in the device purchase, there is no need to purchase this service if it is already taken up in the device purchase).

Registration of this service allows the retail customer to view the location of their GPS tracking device on their mobile phone / smartphone PDA up to twenty (20) times a day (inclusive of redisplay, zooming in/out etc), for that device per day. This service is subsidised by advertising.

Detailed instructions on the setup of the device and usage will be emailed on completion of registration.

For removal of such restrictions of viewing with the MMS and advertising, a nominal annual fee applies.

For fleet (multiple device) tracking requirements, please [contact iTrack123](#) for a custom quote.
